SMART LOAD DEVICE

LED DIRECTION INDICATOR LAMPS/SMART LOAD DEVICE

The Britax LED lamp range includes direction indicator lamps which consume only 1.8-2.5 watts compared to 21 watts for a normal tungsten filament lamp. The lower power consumption may not be detectable by certain vehicle direction indicator flasher units thereby resulting in a false bulb failure warning, even though the LED lamp is operating normally. This problem can be overcome by fitting a SMART LOAD DEVICE with the LED direction indicator lamp. The SMART LOAD DEVICE increases the power consumption in the circuit equivalent to a tungsten filament lamp. The most practical method of assessing whether a SMART LOAD DEVICE is required is to remove the bulb from the lamp on the vehicle which is to be replaced by the LED direction indicator lamp. Note any change in the flash rate, if there is a change in the flash rate, a SMART LOAD DEVICE must be fitted.
